

Onduo and Orpyx to Offer Expanded Market Solutions for Virtual Type 2 Diabetes Care

Onduo to begin including Orpyx foot ulcer sensors and monitoring to help partners enhance care for eligible members

BOSTON—June 10, 2019— Onduo has [partnered](#) with Orpyx Medical Technologies Inc. (Orpyx) to expand market solutions offered to interested healthcare partners this year. Clients of Onduo's integrated hardware and software solution will be able to expand the program to include access to Orpyx foot ulcer sensors for their identified diabetes population. Orpyx clients will also be able to include access to Onduo's Virtual Diabetes Clinic to their population. Together, Orpyx and Onduo are jointly committed to keeping people with diabetes from foot ulcer complications and reducing long-term healthcare costs for those patients and the partners covering their medical care.

Onduo's Virtual Diabetes Clinic provides personalized care to those diagnosed with type 2 diabetes. Onduo leverages behavioral change best practices such as coaching and blood monitoring tools that integrate with its app. Members can also access to a higher level of care, including deeper monitoring with continuous glucose monitors (CGMs), training with certified diabetes educators, and telemedicine support from endocrinologists via its virtual clinic.

Today, 25 percent of people with diabetes develop foot ulcers over their lifetime, and one in five of those people experience complications that lead to amputation.¹ In the U.S. alone, almost one million diabetes-related foot ulcers are treated each year, costing upwards of \$30,000 USD per ulcer with complications that can result in amputation.² "Orpyx helps people with diabetes to prevent foot ulcers, by providing insight that protects foot health and mobility, and reduces the risk of complications that can lead to limb loss," said Breanne Everett, CEO of Orpyx Medical Technologies Inc. "We are pleased to extend access to our foot sensor and monitoring technology to the Onduo member community, and to invite Orpyx U.S. patients to take advantage of Onduo services."

"There are a lot of diabetes management companies that do lifestyle and coaching. At Onduo, we do the same but our clinic is particularly focused on bringing deep clinical interventions that can help those who need more," said Dr. Josh Riff, CEO of Onduo. "One of the top complications - and cost drivers - of living with type 2 diabetes is foot ulcers. This joint offering

About Onduo

Onduo is a virtual diabetes program that provides the tools, coaching and access to specialty doctors that you need to take control of your diabetes and learn what works for you. Founded in 2016 as a joint venture between Verily and Sanofi, Onduo is dedicated to bringing the most up to date care to people living with diabetes – anytime, anywhere. Learn more at www.onduo.com.

About Orpyx Medical Technologies Inc.

Founded in 2010, Orpyx Medical Technologies empowers people with diabetes to maintain mobility. Orpyx’s core product line, the SurroSense intelligent insole system, helps prevent foot ulcers and limb loss through FDA cleared, advanced foot sensor technology and analytics, delivered in an easy-to use ultra-thin insole. Orpyx’s technology is used by researchers to access clinical-grade plantar pressure measurement data for health and human performance applications. Orpyx is focused on collaborating with stakeholders around the world to achieve a healthcare future that is prevention focused and sustainable in cost. Learn more at www.orpyx.com.
